

B-H Analyzer SY-8218 ^{10Hz~10MHz} SY-8219

10Hz~1MHz

Precise fully automatic core loss measurement at high frequency

De facto standard equipment for research & development of soft magnetic materials.

Precise automatic core loss measurement in higher frequency

Precise and accurate core loss measurement

Iwatsu's B-H analyzers which hiring CROSS-POWER method (IEC62044-3) enable precise and highly accurate measurement embedded minimized phase error integration on frequency spectrum with current detecting resisters and compensation on detecting circuit with full compensation on amplitude and phase characteristics. Third generation models from year 1984 are available now to contribute leading-edge development on future power management.

IE-1125B Power amplifier

SY-8218 B-H analyzer

SY-320A Temperature scanner system

Feature

- Wide band frequency range from 10Hz to 10MHz (SY-8218)
- Voltage : ±140V, max. / Current : ±5.2A, max. DC to 3MHz High power amplifier (IE-1125B)
- 41pcs., max. specimen for temperature range of -30°C to 150°C automatic scanner system (SY-321A)
- 36mm(L),min. 35mm(W),max. single sheet test (SY-956)
- DC30A, max. DC-bias superposing test (SY-960/961/962)

B-H analyzer

Single sheet test sys SY-956

Temperature scanner system SY-320A

Power amplifier

HSA4101-IW

HSA4014-IW

IE-1125B

DC-bias test system

Various types of soft magnetic material property test

Full automatic test

Sample parameters (Effective magnetic length, Effective cross section, number of turns of windings, etc.) and test conditions (Frequency, Maximum field strength: Hm, Maximum flux density: Bm, Maximum induced voltage: V2m, Maximum exciting current: I1m) inputs enable obtaining BH hysteresis curve and magnetic properties in value automatically.

Full automatic test with options

Temperature scanner system, Single sheet test system and DC biasing system are able to control with the SY-810 Remote control software.

■ Remote control system configurations

■ REMOTE CONTROL SOFTWARE : SY-810-

Full automatic accurate test for single sheet shape samples such as Silicon-steel sheets, etc.

fLc(cut-off freq.) : Approx. 300Hz Input voltage : ±200V,max. Input current : ±6A,max. Connection cable : BNC cable(0.6m)

10kHz AC coupler SY-504 (standard accessory for B-H Analyzers)

DC biasing source SY-931

DC current : 10A, max. Operation freq. : 1MHz, max.

(mm)

532 46

-6-

Automatic test on power inductor properties with DC biasing

DC-bias test system is uniquely used as an option for SY-8218 or SY-8219 and not be used with other equipment. Adjustment and inspection as a system with BH analyzer is requited. BH analyzers(SY-8218/SY-8219) at the customer end will be returned to our factory for adjustment and inspection when DC-bias test system can be configured as a system.

DC m

60 80 . netic field H_{de}[A/m]

1 1.5 2 DC bias current I_{ds}[A]

DC m

ignetic field H_{de}[A/m]

Automatic test can be performed such as property test vs frequency, etc.

Remote control software SY-810

- Temperature conditions up to 20kinds, Excitation conditions up to 40kinds for each DUT(device under test) are available. This means 20x40(=800)kinds of conditions can be programmed for each sample of DUT.
- Pulse excitation can be controlled with BH analyzer
- Hard copy of displayed results (JPEG, PNG) and signal waveform data at xxx.csv basis can be extracted to PC memory.

Contents of SY-810 : CD (software and operation manual at PDF), GP-IB converter SY-509, Bulkhead adaptor 182766-01 and software license agreement

PC operation environment

- OS: Windows Vista SP2, Windows7 32bit/64bit, Windows8 32bit/64bit
- .NET Framework(packed), CPU Pentium133M or above, Memory at 64Mbyte or more, Display resolution at 1024x768 or above, USB port x1

※Contact our sales for the most recommended system configurations.
※NI GPIB-USB-HS+ (NATIONAL INSTRUMENTS Corp.) is required for PC interface with SY-8218/SY-8219. PC is not included with this system and supplied by customer.

Continuous test function SY-811

Time-tendency property test can be performed at continuous excitation.

- Test timeframe at 99,999minutes(Approx. 70days), max. 60second/test
- 2 kinds of properties can be monitored on display and extracted to memory.
- Measurement item can be changed during test.
- Comparison between Reference and test result on the same display.
- Test data at CSV and display hardcopy at JPG/PNG are available.

※Option for BH analyzer

*Implementation of SY-811 on BH analyzers(SY-8218/SY-8219) at the customer end will be returned to our factory for installation and inspection.

Equipment wagon

Equipment wagon MT-600L
